

Virtual Work Experience

RMBC Repairs and Maintenance Case Study

Overview

ENGIE are committed to delivering Social Value in communities where we are contractually working.

Kerri White from ENGIE held a weeks long virtual work experience with 5 construction students from RNN College Rotherham .

The aim of the experience was for the students to produce a health and safety booklet to present back to group on the last session of the week .

The students were given a planner for the week and invited to TEAMS calls throughout the week where they embarked on lots of different career talks ,site visits, employability sessions and a 1-2-1 mock interview.

Outcomes

Students had a opportunity to interact with professional and existing apprentices at ENGIE while gaining knowledge and experience of the world of work.

The students embraced all the tasks and grew with confidence as the week progressed, they showed commitment, enthusiasm and dedication to the program .

They all received a ENGIE certificate at the end of the program.

Key Features

- Experience within the world of work
- Career guidance

"I'm just writing to say thank you for providing such a comprehensive and insightful Virtual Work Experience for our students with you at Engie. Their glowing reports and enthusiasm for their time with you is evident of how beneficial they have found it to be. I was a little uncertain what to expect with their presentations but you've obviously equipped them with all the knowledge they needed and the confidence and conviction in their own knowledge to do this task completely independently."

Anna Gascoigne—Employment and Skills Tutor RNN
